

Claire Duggan

Director for Programs and Operations, The Center for STEM Education, Northeastern University, Boston, MA

Over the past twenty+ years Claire Duggan has been involved in the design and implementation of multiple STEM (Science, Technology, Engineering and Mathematics) educational outreach programs. She has worked extensively to bridge connections between higher education's research community and its educational partners from K-14. Her work has led to deep understanding and respect for the partner community that Higher Education seeks to support. It has also provided her multiple opportunities to mentor university students interested in sharing their passion for science, engineering and innovation. Claire's continued goals are to utilize this expertise to design and implement innovative programs and partnerships that effectively engage individuals and communities currently underrepresented in these fields and to support the development of the next generation of STEAM professionals, and that meet our rapidly changing regional and national technological needs. Claire received her MPA from Northeastern University. She is currently a co-principal Investigator on several National Science Foundation grant efforts focused on increasing the number of students successful in STEM.
